Agitech is a full-service consulting firm with core competencies in financial infrastructure setup, operating system support, network file servers, networking, distributed processing, Veritas product lines and backup solutions. Our consulting services range from system support and design reviews to retainer-based consulting over the length of the project. Our goal is not to impose one particular solution or model, since the needs of each company are unique. Instead, we tailor our services such that they are most effective for each individual client. We provide the following services with Microsoft technology:

- Consulting Services
o   SOA
o   Architecture Definition
o   Proof of Concept
o   Performance Engineering
o   Capacity Planning

- Full Cycle Implementation
Delivering end-to-end development of .NET based projects and products from conceptualization to certification through a variety of tasks.

- Application Value Management
Agitech supports existing .NET applications and enhancements.

- Application Migration/Upgrade
Exhaustive migration services enable clients to migrate applications from older technologies (Windows DNA, DNA 2000, PowerBuilder) to .NET.

- Application Integration
SOA based seamless integration of existing systems.

- Product Development
Agitech's custom Agile Development Process enhances product innovation and engineering methodologies.
